

News Release Date: Oct 29, 2013

Emprog announces integration of Freescale Processor Expert for the Kinetis Cortex family of MCUs.

Silicon Valley, CA – October 29, 2013 – <u>Emprog</u> ThunderBench[™] C/C++ development tool is now able to offer full integration with Freescale Processor Expert providing added tools support for the Freescale Kinetis ARM[®] Cortex[™] product families.

Freescale Processor Expert is a graphical C code generator creating custom peripheral drivers without the need to know everything about the Kinetis MCU family. Driven by a graphical user interface, it helps developers quickly get up to speed on their MCU configuration code.

Emprog <u>ThunderBench</u> is a complete C/C++ development tool, which offers customers all that they need to complete their Kinetis ARM/Cortex development project. It includes a C/C++ compiler, IDE, debugger, linker, libraries, and many ready-to-use BSPs for Freescale boards & kits. ThunderBench is supported by Emprog's experienced and highly qualified technical support team.

In addition, ThunderBench for Kinetis provides highly optimizing compilation and build tools with extensive debugging and analysis possibilities such as complex structure breakpoints, stack performance report and much more.

"We're happy integrating Emprog ThunderBench with Processor Expert as an added value to our toolsuite," said Dan Augustine, Marketing Manager at Emprog. "We are committed to constantly improving our products, and offering such integration with Freescale Processor Expert is an excellent choice that clearly benefit our mutual customers"

About Emprog ThunderBench for ARM/Cortex

ThunderBench for ARM/Cortex is a comprehensive integrated tool that combines a C/C++ compiler, a Debugger and an IDE within the Eclipse platform supporting any 32-bit ARM/Cortex device. The integration and the fine crafting of the Eclipse platform offered by Emprog ThunderBench not only removed the age-old gap between 'proprietary' and 'open technology' tools, they have gone far beyond. With the introduction of project creation wizards and ThunderCloud for up to-date BSPs, Emprog ThunderBench is second to none in offering complete 'out of the box' development solutions for embedded systems.

About Emprog

Emprog is a provider of enhanced integration of standard development tools for Embedded programming. The company's flagship product ThunderBench has the best deployment of any Eclipse IDE platform. ThunderBench for ARM enables thousands of engineers to develop their products using high performance 32-bit Cortex/ARM devices in several industry areas such as medical, consumer electronics, automotive, wireless, LED, and telecom. A wide range of partners and Middleware vendors are supporting ThunderBench via Eclipse plugin capabilities. For more information visit www.emprog.com
